Apple Yesterday 1:36 PM

Hello,

Thank you for submitting the new app, Care Hub - Driver, for review. We noticed some issues that require your attention. Please see below for additional information.

If you have any questions, we are here to help. Reply to this message in App Store Connect and let us know.

Review Environment

Submission ID: 537b866d-a0bf-4962-8ce6-0ea8e4852c0a
Review date: April 15, 2026
Review Device: iPad Air 11-inch (M3)
Version reviewed: 1.0.0

Guideline 4.2 - Design - Minimum Functionality

Issue Description

The app provides a limited user experience as it is not sufficiently different from a web browsing experience. As such, the experience it provides is similar to the general experience of using a web browser. Including features such as push notifications, Core Location, or sharing do not provide a robust enough experience to be appropriate for the App Store.

Next Steps

To resolve this issue, please revise the app to provide a more robust user experience by including additional native functionality.

Resources

Learn more about minimum functionality requirements in guideline 4.2.

Guideline 2.3.10 - Performance - Accurate Metadata

Issue Description

The app or metadata includes information about third-party platforms that may not be relevant for App Store users, who are focused on experiences offered by the app itself.

Next Steps

Revise the app's binary to remove Google Play references.

Reply to App Review in App Store Connect with additional information if the app's functionality and how it interacts with third-party platforms has been misunderstood.

Resources

Learn how to edit App Store metadata on App Store Connect Help.

Guideline 4 - Design

Issue Description

We noticed that the user is taken to the default web browser to sign in or register for an account, which provides a poor user experience.

Next Steps

To resolve this issue, please revise the app to enable users to sign in or register for an account in the app.

You may also choose to implement the Safari View Controller API to display web content within the app. The Safari View Controller allows the display of a URL and inspection of the certificate from an embedded browser in an app so that customers can verify the webpage URL and SSL certificate to confirm they are entering their sign in credentials into a legitimate page.

Resources

- For additional information on the Safari View Controller API, please review the What's New in Safari webpage.
- Note that apps that support account creation must also offer account deletion, per guideline 4. Learn more about offering account deletion in the app.

Guideline 2.1(a) - Performance

Issue Description

The app crashed during review. Apps that crash negatively impact users.

Steps leading to crash:

App crashed when we tapped on the 'Take Photo' button.

Review device details:

- Device type: iPad Air 11-inch (M3)
- OS version: iPadOS 26.4.1

Next Steps

Test the app on supported devices to identify crashes and stability issues before resubmitting for review. Crash logs have been attached to help resolve this issue:

1. Fully symbolicate the crash report. See Adding Identifiable Symbol Names to a Crash Report.
2. Match the crash report to a common pattern. Based on the pattern, take specific actions to further investigate the crash. See Identifying the Cause of Common Crashes.
3. Once the root causes of the crash have been identified, make the appropriate changes to the binary to resolve the issue.
4. Test the app on a device to ensure that it runs as expected.

Note that users expect apps they download to function on all the devices where they are available. For example, apps that may be downloaded onto iPad devices should function as expected for iPad users.

Resources

- For more information on crash reports, see Diagnosing Issues Using Crash Reports and Device Logs.
- For information about testing apps and preparing them for review, see Testing a Release Build.
- To learn about troubleshooting networking issues, see Networking Overview.

Guideline 1.5 - Safety

Issue Description

The Support URL provided in App Store Connect, https://admin.carehubapp.com, does not direct to a website with information users can use to ask questions and request support.

Next Steps

Update the specified Support URL to direct users to a functional webpage with support information.

Resources

- Learn about Support URLs and other platform version information on App Store Connect Help.
- Learn more about developer information requirements in guideline 1.5.

Support

- Reply to this message in your preferred language if you need assistance. If you need additional support, use the Contact Us module.
- Consult with fellow developers and Apple engineers on the Apple Developer Forums.
- Provide feedback on this message and your review experience by completing a short survey.
